

Abstract of the Disclosure

An anti-snag fishing jig includes a body with a generally spherical configuration, an exterior surface and an interior. A fishhook includes a shaft, which passes through the body interior and is secured therein. The shaft includes a proximate end forming an eyelet for attaching a line and a distal end forming a barb. A deflector extends upwardly and rearwardly from the body and terminates in front of the fishhook barb. The jig is coated with paint or some other suitable coating for visibility and protection.
